THE WOLF
USE AND CARE GUIDE
CLEANING, MAINTENANCE, AND MORE
THANK YOU FOR CHOOSING WOLF

The precision, craftsmanship, and durability of your new Wolf products ensure many years of more delicious meals, and more enjoyable experiences as you prepare them. We’ll do everything we can to help you get the most from your new appliances - the most performance, convenience, and pleasure. Please take a little time to familiarize yourself with this guide to using, cleaning, and maintaining your Wolf equipment. If at any time you have questions you would like to ask us directly, please call our Customer Relations Team at 1-800-363-3818 or email them at crt@rothliving.com. Also, our Roth Living Showroom Staff is always available to answer your use and care questions at 1-800-821-6374. And visit subzero-wolf.com for recipes and helpful “how to” videos. We look forward to serving you for many delicious years to come!

SIGN UP FOR AN OWNERSHIP EXPERIENCE CLASS

Offered by Roth Living Showrooms, the class is an informative and enjoyable way to master the details of your new Wolf products (and to taste some of the delicious results Wolf helps create). Visit rothliving.com for a schedule.

GENERAL CLEANING TIPS & ADVICE

1. DO NOT place any parts of your Wolf appliance in the dishwasher for cleaning unless they are specifically identified as dishwasher safe.

2. Carefully read the labels of any new product you are trying, making sure to avoid abrasive cleaners.

3. When cleaning stainless steel, always wipe in the direction of the stainless steel grain or finish.

4. When trying new cleaners, always test on a part of the appliance that won’t be seen.

RECOMMENDED CLEANERS

DEGREASER  Formula 409 or Fantastick Orange.

MILD ABRASIVE CLEANERS  Soft Scrub, Bon Ami, Bar Keepers Friend.

SPONGES AND STEEL WOOL  Scotch-Brite (blue), fine-grade steel wool (000).

STAINLESS STEEL POLISH  Signature Polish, white vinegar and water, Magic Stainless Steel Cleaner.

MILD DETERGENTS  Ivory Cleaners, Joy Cleaners, Dawn Cleaners, Palmolive Cleaners.

RECOMMENDED CLEANING METHODS

WOLF OVEN INTERIORS

• Soap and water, degreaser.
• Multi-purpose, no-scratch Scotch-Brite pad (blue, not the green).
• For the oven floor, use a hard plastic scraper to remove stubborn baked-on food.
• For the windows, use a degreaser and fine-grade (000) steel wool.

OVEN RACKS, PRESSED STEEL TOPS AND PORCELAIN-COATED GRATES

• Soap and water, degreasers.
• You may use mild abrasive cleaners such as Soft Scrub, Bon Ami, and Bar Keepers Friend.

ELECTRIC AND INDUCTION COOKTOPS

• Apply a cooktop cleaning cream, such as Elco, with a damp cloth.

STAINLESS STEEL

• Soap and water, degreasers.
• Stainless steel polish, such as Signature Polish.
• White vinegar and water.
• Do not use abrasive cleaners; they will permanently scratch stainless steel surfaces. Salt and some cooking liquids may pit and stain stainless steel surfaces. Remove these spills immediately.
• Use a spray degreaser to remove fingerprints and greasy spatters. Spray the cleaner on a cloth and wipe the surface. Buff dry immediately to avoid streaking. For hard water stains, use white vinegar and water.
• For general cleaning use a soft, non-abrasive stainless steel cleaner, such as Signature Polish, and apply with a soft, lint-free cloth.
• To bring out the natural luster, lightly wipe the surface with a water-dampened, microfiber cloth followed by a dry polish chamois.
• Wipe with the grain direction of the finish. For best results, keep the cloth in continuous contact with the stainless steel.

BEFORE USING FOR THE FIRST TIME
To ensure that all residual oil from the manufacturing process has been removed, each oven must go through the following procedure.

1. Clean oven thoroughly with hot water and a mild detergent. Rinse and dry with a soft cloth.
2. Turn on ventilation. Some smoke and odor is normal.
3. Touch or turn knob to CONVECTION ROAST (ROAST for 27” lower oven) and set temperature to 550°F (290°C) for one hour.
4. Touch OFF (turn knob for professional model) and allow oven to cool with the door closed.

USING YOUR OVEN

COOKING MODES
The oven has ten cooking modes—bake, roast, broil, convection roast, convection, Gourmet, proof, stone, dehydrate, and warm.

Stone and dehydrate require accessories. The 27" lower oven includes six cooking modes—bake, roast, broil, Gourmet, proof, and warm.

SETTINGS CONTROLS
1. Touch QUICK START. The oven will default to BAKE mode. Touch or use slide bar to select desired cooking mode.

For professional model, turn selector knob to desired cooking mode.

2. Touch START to select the default temperature. To change temperature, touch or use slide bar to select desired temperature, then touch START. For professional model, turn selector knob to adjust temperature.

3. Touch OFF to end mode. For professional model, turn selector knob to OFF.

### TEMPERATURE PROBE

The temperature probe measures the internal temperature of food while cooking. It can be used with all cooking modes except broil, proof, and dehydrate. Setting controls:

1. Preheat oven to desired temperature in desired mode (bake or stone mode for breads) and insert probe into the thickest part of food. When making bread, bake for approximately 10 minutes before inserting probe.
2. When preheat is complete, plug the probe into probe receptacle. Refer to the illustration. Close oven door.
3. Touch PROBE.
4. Touch SET to select the default temperature. To change temperature, use slide bar to select desired temperature, then touch SET.
5. A chime sounds when the food's internal temperature has reached probe set point. Remove and reinsert probe to verify internal temperature, then select OK or OFF.

## GOURMET MODE

Gourmet provides delicious, foolproof preparation of popular meals. It even indicates the ideal rack position for the food you are preparing.

### CHOOSE FROM SIX CATEGORIES

1 | MEAT | 2 | FISH | 3 | BAKED GOODS | 4 | PIZZA | 5 | VEGETABLES | 6 | ONE-DISH MEALS

Each category can be refined to ensure the most effective cooking mode and rack position for your dish. Refer to the Gourmet guide below.

## GOURMET MODE GUIDE

**MEAT**

- Beef*—steak, tenderloin, roast, prime rib, meatloaf, slow roast
- Poultry*—whole bird, fresh pieces, whole breast
- Pork*—ribs, tenderloin, roast, steak, chops, whole ham
- Lamb*—leg, roast, rib rack

**BAKED GOODS**

- Cookies
- Cake — sheet, fluted, angel, pound, cupcakes
- Pie — single crust, double crust
- Bread — quick bread, yeast loaf, yeast rolls, biscuits

**PIZZA**

- Fresh
- Par-Baked
- Calzone

**VEGETABLES**

- Roasted
- Sweet Potato*

**ONE DISH MEALS**

- Casserole*
- Lasagna*
- Quiche

---

*Does not require preheat
USING YOUR OVEN’S SELF-CLEAN FEATURE

During the cleaning cycle, the oven is heated to an extremely high temperature to burn off food residues. Oven lights are disabled. Setting controls:

1. Touch QUICK START, then select CLEAN.
   (For professional model, turn selector knob to MORE, then select CLEAN on the control panel).
2. Remove oven racks and rack guides, then touch OK.
3. Touch START.
4. Touch OFF to end mode. For professional model, turn selector knob to OFF. Oven door will lock and remain locked until the clean cycle has ended and oven temperature has cooled below 550°F (290°C).

CARE RECOMMENDATIONS

STAINLESS STEEL
Use a non-abrasive stainless steel cleaner and apply with a soft, lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.

BLACK GLASS
Spray glass cleaner on a cloth to clean.

OVEN RACKS AND GUIDES
Remove and place on a flat surface near the sink. Clean with hot water and mild detergent or paste of baking soda and water. Do not immerse in water. Towel dry.

CONTROL PANEL
Use spray degreaser to remove fingerprints and food matter. Spray cleaner on a cloth before wiping panel.

1. Do not spray cleaners directly on control panel.

OVEN INTERIOR
Before using the clean feature, use a razor blade to gently lift baked-on foods from the oven cavity and window. For stubborn stains, spray with a mild abrasive cleaner or spray degreaser and scrub with a no-scratch Scotch-Brite™ pad (pink or blue). Wash the entire oven cavity with soap and water to remove all cleaning chemicals before entering the clean cycle. If chemical residue is not cleaned from the cavity, etching of the porcelain may occur. Once the clean cycle is complete, allow the oven to cool completely and wipe out ash with a damp cloth.

BROILER PAN
To clean the upper rack, use mild detergent and a scouring pad. Rinse and dry. To clean the bottom pan, discard grease and wash with hot water and mild detergent. Rinse and dry. The upper rack is dishwasher safe; however, do not place the porcelain-coated pan in dishwasher.

E SERIES AND L SERIES OVENS

BEFORE USING FOR THE FIRST TIME

1. Clean oven thoroughly with hot water and a mild detergent. Rinse and dry with a soft cloth.
2. Set the oven to convection roast at 500°F for one hour. Allow the oven to cool with the door closed. This process will burn off any residual oil and grease used during the manufacturing process. You may notice a small amount of smoke and odor during the initial self-cleaning period; this is normal. The oven door can be opened after the oven has cooled significantly.
3. Once the oven has cooled completely, wipe interior of oven with damp cloth and dry thoroughly.

USING YOUR OVEN

WOLF DUAL CONVECTION SYSTEM
Two fans and four heating elements, digitally controlled, provide more uniform heat and more versatility than other convection systems. Ten cooking modes enable you to choose the one precisely suited to the dish you’re preparing.

<td>Dries a variety of fruits, vegetables, and meats. Accessory racks and door stop required. Additional instructions included with accessory.</td>
</tr>
</tbody>
</table>

SELF-CLEAN
Oven heats to an extremely high temperature to allow food soil to burn off.

* On L series ovens, touch and hold BAKE for 3 seconds to put oven into proof mode.
** On L series ovens, touch and hold CONVECTION for 3 seconds to put the oven into dehydration mode.
TEMPERATURE PROBE (E SERIES)

1. Preheat oven to desired temperature in desired mode.
2. When the oven signals that preheat is complete, place meat on rack and insert probe into the thickest part of the meat.
3. Use dry pot holder to lift the probe sensor cover on the oven wall and slide probe connector into the receptacle.
4. With the door closed, touch PROBE then use number pad to program desired internal temperature.
5. Touch ENTER; the probe will read LO until it registers over 100°F. Once above 100°F, the display will show the temperature as the food approaches doneness.
6. The display will alternate between the probe temperature and the oven temperature.
7. When the desired internal temperature is reached, three chimes will signal doneness.
8. Probe and probe sensor cover become very hot. Handle with a dry potholder.

USING THE TEMPERATURE PROBE FOR BREADS

Use the instructions listed above for meats but bake bread for 10 minutes without the probe before inserting probe into thickest part of bread.

CARE RECOMMENDATIONS

STAINLESS STEEL

Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.

CONTROL PANEL

Use spray degreaser to remove fingerprints and food soil. Spray on a cloth before wiping panel.

BLACK GLASS

Spray glass cleaner on a cloth to clean.

OVEN INTERIOR

Before using self-clean feature, use a razor blade to gently lift baked on foods from oven cavity and window. For stubborn stains, spray with a mild abrasive cleaner or spray degreaser and scrub with a no-scratch Scotch-Brite™ pad. Wash entire oven cavity with soap and water to remove all cleaning chemicals before entering self-clean mode. After the self-clean cycle, allow oven to cool and wipe out ash with a damp cloth.

OVEN RACK GUIDES

Remove and place on a flat surface near the sink. Clean with hot water and mild detergent or paste of baking soda and water. Do not immerse in water. Towel dry.

OVEN LIGHT COVER

When the oven is cool, remove the oven racks and guides. Remove the light cover by gently prying the bottom edge with a flat screwdriver. Clean with a mild abrasive cleaner. The existing bulb can be replaced with a 20-watt halogen bulb.

BROILER PAN

To clean the upper rack, use mild detergent and a scouring pad. Rinse and dry. To clean the bottom pan, discard grease and wash with hot water and mild detergent. Rinse and dry.
BEFORE USING FOR THE FIRST TIME
1. Use the test strip provided to determine water hardness. Adjust hardness within user settings if needed.
2. Clean the interior cooking space and accessories with warm, soapy water and a soft cloth.
3. Fill and install the water tank.
4. Remove baking pans and heat the empty oven using auto steam bake mode for 30 minutes at 410°F.

USING YOUR CONVECTION STEAM OVEN
OPENING THE WATER TANK
1. Press the WATER button.
2. Always use this button to open the water tank. Trying to access the water tank manually will damage the oven.

FILLING THE WATER TANK
1. Press WATER, remove and fill the tank with fresh, cold tap water. Never fill the tank with demineralized, filtered, or distilled water.
2. Close the lid.
3. Push the water tank into its compartment and make sure it is firmly seated. The water tank holds enough water for 1.5 hours of continuous steam, typically enough for four or five cooking sessions. In the event the tank needs refilling in the middle of a cooking session, add no more than two cups of water. This will prevent overflow when water is pumped back into the tank.
4. Close the panel flap manually.

EMPTYING THE WATER TANK
1. When the oven is turned off and the temperature is below 175°F, residual water is pumped back into the water tank. Do not remove the water tank until WATER IS BEING PUMPED OFF no longer appears in the text display.
2. If DO NOT REMOVE WATER TANK is displayed in the text display, the residual water temperature is still more than 175°F.
3. When the water has been pumped back you may remove, empty, and dry the water tank. The oven is off when the symbols are no longer illuminated and the text display is dark.

CLEANING YOUR CONVECTION STEAM OVEN

CLEANING THE COOKING SPACE

- After each cooking session, leave the oven door partially open until the interior has cooled down. When it has cooled, remove condensate or spilled food using a soft cloth dampened with soapy water. Dry with a soft cloth.
- For general cleaning, initiate the Steam mode at 175°F (80°C) for 30 minutes. This will loosen fat and cooking debris from the oven. Turn the oven off and wipe the interior with a cloth.
- For stainless surfaces, rub a non-abrasive stainless steel cleaner with a soft cloth, following the direction of the grain.

CLEANING THE EXTERIOR

- To clean the door front, spray a glass cleaner on a cloth.
- Use spray degreaser to remove fingerprints and food soil from the control panel. Spray cleaners on the cloth before wiping the panel.
- For metallic surfaces, rub a non-abrasive stainless steel cleaner with a soft cloth, following the direction of the grain.

DESCALING

GENERAL TIPS

Depending on water conditions, the oven may need to be descaled every 6–18 months. When the oven needs to be descaled, Boiler SCALED UP—PLEASE DESCAL e will appear on the display.

DURGOL DESCALER

Only use Durgol® Swiss Steamer descaling solution and follow the manufacturer’s instructions. Durgol® can be ordered online at subzero-wolf.com/store

RUNNING THE DESCALING PROGRAM

For safety reasons, the descale program cannot be interrupted or stopped once it is started.

1. With the oven off, press OK and turn the knob to Descaler, then press OK. ADJUST PT (1.5 L) DESCALER—AND PRESS OK appears on the display.
2. Remove water tank and pour entire descaling solution contents into the tank, then reinstall water tank and press OK.
3. After about 30 minutes, POW. AWAY DESCALER—ADD 2 PT (1 L) WATER appears on the display. Remove tank, turn on faucet, then pour descaler down the drain.
4. Fill the tank with warm tap water and reinstall. DESCALER APPLIANCE—1ST RINSE CYCLE appears on the display. After about 45 minutes, POW. AWAY WATER—DESCALING COMPLETED appears on the display.
5. Depending on the level of soil in the rinse water, the oven will determine whether additional rinse cycles are necessary. Follow instructions on the display.
6. Once the rinse cycles are complete, remove, empty, and dry the water tank; then wipe all stainless steel surfaces.

For metallic surfaces, rub a non-abrasive stainless steel cleaner with a soft cloth, following the direction of the grain.

CLEANING THE OVEN

CLEANING THE COOKING SPACE

- After each cooking session, leave the oven door partially open until the interior has cooled down. When it has cooled, remove condensate or spilled food using a soft cloth dampened with soapy water. Dry with a soft cloth.
- For general cleaning, initiate the Steam mode at 175°F (80°C) for 30 minutes. This will loosen fat and cooking debris from the oven. Turn the oven off and wipe the interior with a cloth.
- Blue tarnish spots and condensate residue can easily be removed with lemon juice and a damp cloth. Do not use a steam cleaner.
- Do not spray the inside or the outside of the oven with water.
- Over time the cooking space acquires a golden hue. This is a normal property of stainless steel and does not affect operation or the quality of cooking or baking.

CLEANING THE EXTERIOR

- To clean the door front, spray a glass cleaner on a cloth.
- Use spray degreaser to remove fingerprints and food soil from the control panel. Spray cleaners on the cloth before wiping the panel.
- For metallic surfaces, rub a non-abrasive stainless steel cleaner with a soft cloth, following the direction of the grain.

DESCALING

Only use Durgol® Swiss Steamer descaling solution and follow the manufacturer’s instructions. Durgol® can be ordered online at subzero-wolf.com/store

RUNNING THE DESCALING PROGRAM

For safety reasons, the descale program cannot be interrupted or stopped once it is started.

1. With the oven off, press OK and turn the knob to Descaler, then press OK. ADJUST PT (0.5 L) DESCALER—AND PRESS OK appears on the display.
2. Remove water tank and pour entire descaling solution contents into the tank, then reinstall water tank and press OK.
3. After about 30 minutes, POW. AWAY DESCALER—ADD 1 PT (0.5 L) WATER appears on the display. Remove tank, turn on faucet, then pour descaler down the drain.
4. Fill the tank with warm tap water and reinstall. DESCALER APPLIANCE—1ST RINSE CYCLE appears on the display. After about 45 minutes, POW. AWAY WATER—DESCALING COMPLETED appears on the display.
5. Depending on the level of soil in the rinse water, the oven will determine whether additional rinse cycles are necessary. Follow instructions on the display.
6. Once the rinse cycles are complete, remove, empty, and dry the water tank; then wipe all stainless steel surfaces.

For metallic surfaces, rub a non-abrasive stainless steel cleaner with a soft cloth, following the direction of the grain.
BEFORE USING FOR THE FIRST TIME

1. Fill the water tank.
2. Slide unit forward and press the main power switch located behind the front (right) control panel.
3. To select desired language, scroll through languages until your desired language is displayed, then press and hold .
4. Press . Hot water will be dispensed from the hot water spout.
5. The unit will turn off automatically after initial power up is complete.

COFFEE SYSTEM

TO MAKE COFFEE

WHOLE BEANS
Do not use oily, caramelized, or flavored beans.

1. Press  multiple times to select the desired taste. Choices include extra-mild, mild, standard, strong or extra-strong.
2. Press  multiple times to select the desired volume.
   - Espresso (1 oz)
   - Short Coffee (3 oz)
   - Coffee (9 oz)
   - Long Coffee (12 oz)
3. Press  to initiate the cycle or press  to double the volume and initiate the cycle.
4. Adjust the height of the coffee spout as close to the cup as possible.

For all beverages 12 oz (360 ml) or larger,  will appear on the display.

5. Once levels have been verified, press  to initiate the cycle.

PRE-GROUND COFFEE

1. Press  multiple times and select pre-ground.
2. Using the handle, slide unit forward and open the pre-ground coffee lid.
3. Use the scoop provided to place one scoop of pre-ground coffee into the funnel, then slide unit back into position.
   NOTE: Using more than one scoop will cause unit to clog.
4. Press  multiple times to select the desired volume.
5. Press  to initiate the cycle. Press  to initiate the cycle and double the volume.
6. Adjust the height of the coffee spout as close to the cup as possible.
TO MAKE CAPPUCCINO
1. Remove water spout, if needed.
2. Adjust the froth regulator on the milk container to the desired amount.
3. Fill with milk and insert the milk container.
4. Place a cup under the coffee spout, then make sure the milk spout is positioned over the cup.
5. Press 🚀 to initiate the cycle.
6. Once the cycle is complete, place a cup under the milk spout, then press and hold CLEAN on the milk container until the bar is complete.
7. Remove milk container and place in refrigerator.

TO MAKE LATTE MACCHIATO, CAFFELATTE, FROTHED MILK
1. Remove water spout, if needed.
2. Adjust the froth regulator on the milk container to the desired amount.
3. Fill with milk and insert the milk container.
4. Place a cup under the coffee spout, then make sure the milk spout is positioned over the cup.
5. Press 🚀, press ▲ or ▼ to scroll to desired beverage, then press ✗ to initiate the cycle.
6. Once the cycle is complete, place a cup under the milk spout, then press and hold CLEAN on the milk container until the bar is complete.
7. Remove milk container and place in refrigerator.

CARE RECOMMENDATIONS
CLEANING
- EMPTY GROUNDS CONTAINER is displayed when the grounds container is full or if the grounds container has not been emptied for approximately three days. To access the grounds container, open the service door. Slide the drip tray forward to remove. Refer to the illustration below.
- The milk container lid can be disassembled for cleaning. Refer to the illustration below.
- Clean the infuser at least once a month. Turn the unit off, then open the service door and remove the drip tray and grounds container. Press the two red buttons inward and remove the infuser. Soak in water approximately five minutes, then rinse and towel dry. Do not use detergent. Replace by sliding the infuser onto the internal support and bottom pin, then press PUSH until it clicks into place. Verify the red buttons have snapped out.
- Do not use detergent to clean the infuser. It will remove lubricant on interior parts.

DESCALE
Use only EcoDecalk descaling solution.
1. Remove the water tank and empty completely.
2. Fill the tank half full with water then add entire descaler contents. Reinstall the water tank.
3. Install the water spout, then place a large container, more than 50 oz (2 L), under the spout.
4. When the appliance is on, press 🚀 to access options.
5. Press ▲ or ▼ until DESCALER is displayed, then press ➕ DESCALING UNDERWAY will appear on the display.
6. After 30 minutes, RINSING FILL TANK is displayed. Fill the water tank with water and empty the large container, then reinstall.
7. Press ➕ RINSING PLEASE WAIT will appear on the display.
8. Once the cycle is complete, RINSING COMPLETE will appear on the display, then fill container and press ➕. Press ➕ and then press 🚀.
**DUAL FUEL RANGES AND RANGETOPS**

**BEFORE USING FOR THE FIRST TIME**

- To ensure all residual oil from the manufacturing process has been removed, clean the range, including the oven, thoroughly with hot water and a mild detergent prior to use. Rinse with a damp cloth and dry with a soft cloth.
- Verify surface burner components are assembled correctly.
- Optional griddle, charbroiler, and French top require special attention. Please see those sections of this guide.
- For dual fuel ranges, rotate the oven’s selector bezel to Roast and adjust the temperature to 550°F for one hour. Turn oven off and allow it to cool with the door closed.
- For before-use oven instructions, please refer to E and L series ovens section.

**USING THE DUAL FUEL RANGE AND RANGETOP**

Your range or rangetop is equipped with Wolf’s dual-stacked, sealed gas burners, a unique design whose two sets of flame ports, an upper tier and a lower tier, furnish exceptionally precise temperature control, from high, searing heat to a low, delicate flame for simmering and melting.

**TEMPERATURE GUIDE**

<table>

TO ACCESS RECIPES AND “HOW TO” VIDEOS, VISIT SUBZERO-WOLF.COM. FOR CUSTOMER CARE, CALL 1-800-363-3818.
CLEANING THE DUAL FUEL RANGE AND RANGETOP

RANGE
For general cleaning, use a soft, non-abrasive stainless steel cleaner, like Signature Polish, and apply with a soft, lint-free cloth. To bring out the natural luster, lightly wipe the surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Wipe along the grain direction of the finish. You will obtain better results by keeping the cloth in continuous contact with the stainless steel.

BURNER Drip Pan
• Use a cloth or sponge and wipe the surface with warm water and a mild detergent. Rinse and dry immediately.
• Do not use abrasive cleaners; they will permanently scratch porcelain enamel surfaces.

BURNER GRATES
• Remove burner grates and clean with a non-abrasive cleaner, such as liquid detergent in hot water or a paste of baking soda and water.
• Spray degreasers and mild abrasive cleaners may be used.

CONTROL KNOBS
• Wipe control knobs with a damp cloth, mild detergent, and water. Rinse and dry.
• Do not soak the knobs, and do not use abrasive cleaners; they will scratch the finish and remove markings.

CONTROL PANEL
Use a spray degreaser to remove fingerprints and food spatters. Spray the degreaser on a cloth before wiping panel.
Do not spray directly on the panel around valve stems.

SPARK IGNITERS
• Keep dry; never spray water or cleaner directly on the igniter.
• Avoid contact with the igniter when cleaning surface burners.

BURNER CAPS
Wash in warm water and detergent or mild abrasive cleaner. Rinse and dry.

CLEANING THE DUAL FUEL RANGE OVENS

STAINLESS STEEL
Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.

CONTROL PANEL
Use spray degreaser to remove fingerprints and food soil. Spray on a cloth before wiping panel.

BLACK GLASS
Spray glass cleaner on a cloth to clean.
OVEN INTERIOR
Before using self-clean feature, use a razor blade to gently lift baked on foods from oven cavity and window. For stubborn stains, spray with a mild abrasive cleaner or spray degreaser and scrub with a no-scratch Scotch-Brite™ pad. Wash entire oven cavity with soap and water to remove all cleaning chemicals before entering self-clean mode. After the self-clean cycle, allow oven to cool and wipe out ash with a damp cloth.

OVEN RACK GUIDES
Remove and place on a flat surface near the sink. Clean with hot water and mild detergent or paste of baking soda and water. Do not immerse in water. Towel dry.

OVEN LIGHT COVER
When the oven is cool, remove the oven racks and guides. Remove the light cover by gently prying the bottom edge with a flat screwdriver. Clean with a mild abrasive cleaner. The existing bulb can be replaced with a 20-watt halogen bulb.

BROILER PAN
To clean the upper rack, use mild detergent and a scouring pad. Rinse and dry.
To clean the bottom pan, discard grease and wash with hot water and mild detergent. Rinse and dry.

GAS RANGES
BEFORE USING FOR THE FIRST TIME
1. Clean oven thoroughly with hot water and a mild detergent. Rinse and dry with a soft cloth.
2. Set oven temperature to 250°F and allow oven to heat for 1 hour. Some smoke and odor is normal.
3. Set oven temperature to 500°F and allow oven to heat for an additional hour.
4. Turn oven off and allow it to cool with the door closed.

USING THE GAS RANGE
BAKE
• To set oven temperature, press and turn the oven control knob counterclockwise to the desired temperature. Once preheat is complete, the oven indicator light will turn off.
• To use convection, press the convection fan button. Convection cooking is preferred for tender cuts of meat and poultry, air-leavened baked foods, breads, cakes, and cookies. Cook foods uncovered in low-sided pans.
• Standard cooking is best for less tender cuts of meat that should be covered, covered one-dish recipes, and pizzas.

BROIL
• The convection oven has an infrared broiler that cooks food by searing the exterior and sealing in juices.
• To broil, always use the two-piece broiler pan that came with your range. Push and turn control knob counterclockwise to BROIL. Do not preheat.

CLEANING THE GAS RANGE
STAINLESS STEEL
Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.
CHAR BROILER

BEFORE USING FOR THE FIRST TIME
- To assemble, position charbroiler frame on the range.
- Position blank-off plate centered directly on ceramic tiles.
- Install charbroiler grate.

USING YOUR CHAR BROILER
- Remove the stainless steel cover, then push and turn the control knob clockwise to HI.
- Igniter will begin to click until burner is lit.
- Allow to preheat for 10 minutes.

CLEANING THE CHAR BROILER
To keep the charbroiler looking its best, clean it after every use. Allow the charbroiler surface to cool before cleaning.

CHAR BROILER GRATE
- After cooking is complete, allow charbroiler to remain on for 10 minutes – the heat will help burn off excess food particles.
- When cool, remove grate and place in sink. Cover with wet dish towels and pour hot water over it to help loosen residue.
- Clean with soap and a scouring pad. Rinse and dry.

CHAR BROILER FRAME
- Remove the frame and place in sink. Soak in hot water and mild detergent. Wash thoroughly and scrub with scouring pad.
- To clean the blank-off plate, remove and use a soap-filled scouring pad to remove residue. Clean with hot water and mild detergent.

IGNITER
Avoid contact with the igniter; it is fragile and can chip or break.

GRIDDLE

BEFORE USING FOR THE FIRST TIME
The griddle is thermostatically controlled to maintain a consistent temperature.
To prevent food from sticking, you must season the griddle prior to use.

USING YOUR GRIDDLE
- Remove the stainless steel cover, then push and turn control knob counterclockwise to desired temperature.
- Igniter will begin to click until burner is lit. Double griddle has separate controls for each side.
- Indicator light above the knob illuminates until griddle reaches set temperature.

TO SEASON GRIDDLE
1. Turn on ventilation.
2. Griddle has a protective coating that must be removed before use. Use hot water and mild detergent to remove. Rinse and dry.
3. Push and turn control knob counterclockwise to 350°F (175°C) and heat for 30 minutes.
   After 30 minutes, turn to OFF and allow to cool.
4. White surface is still slightly warm; pour a small amount of peanut oil or vegetable oil on a paper towel and spread evenly.
5. Push and turn control knobs to 350°F (175°C). Heat until griddle begins to smoke, then turn to OFF and allow to cool.
   Once cool, wipe off any excess oil.

GRIDDLE COOKING CHART

<table>
<thead>
<tr>
<th>TEMPERATURE</th>
<th>COMMON FOODS</th>
</tr>
</thead>
<tbody>
<tr>
<td>100°F-200°F</td>
<td>holds cooked food at serving temperature</td>
</tr>
<tr>

<td>eggs</td>
</tr>
<tr>
<td>300°F-350°F</td>
<td>bacon, pork chops, lamb, sandwiches, sausage, boneless chicken breasts</td>
</tr>
<tr>
<td>350°F-375°F</td>
<td>french toast, pancakes</td>
</tr>
<tr>
<td>400°F-425°F</td>
<td>vegetables (sliced or grated)</td>
</tr>
</tbody>
</table>

CLEANING THE GRIDDLE
- Scrape grease into grease collection tray after every use.
- When surface has cooled, wipe with a paper towel to remove excess grease or oil.
- After each use, reapply a small amount of peanut or vegetable oil on a paper towel and spread evenly.
- Every now and then, remove seasoning by pouring 1/2 cup (120 ml) warm water and 1 teaspoon (5 ml) griddle cleaner onto griddle and scrape residue into grease collection tray, then empty. When dry, reapply a small amount of oil for seasoning.
BEFORE USING FOR THE FIRST TIME

To protect the surface from food splatters and moisture, you must season the French top prior to use.

1. French top has a protective coating that must be removed before use. Use hot water and mild detergent to remove. Rinse and dry.
2. Push and turn control knob counterclockwise to HI and heat for 30 minutes. After 30 minutes, turn to OFF and allow to cool.
3. While surface is slightly warm, pour a small amount of peanut or vegetable oil on a paper towel and spread evenly.

USING THE FRENCH TOP

• Remove the stainless steel cover, then push and turn control knob counterclockwise to HI. Igniter will begin to click until burner is lit.
• Allow to preheat for 30 minutes.
• Always cook in pans. Do not cook food directly on the surface.
• Never remove the center plate while cooking.
• To bring large amounts of water to a boil, it is quickest to use one of the surface burners.

CLEANING THE FRENCH TOP

• Clean entire surface after each use while slightly warm. Wipe with mild detergent and water. Rinse and dry.
• After each use, reapply a small amount of peanut or vegetable oil on a paper towel and spread evenly.
• Occasionally, remove seasoning by applying a small amount of white vinegar and water to surface while slightly warm. Scrub and repeat until excess oil has been removed. Reapply a small amount of oil for seasoning.

CLEANING TIPS

• Wait until surfaces are cool before cleaning.
• For best results, wipe up spills and splatters either as they occur or immediately after the rangetop has cooled. If splatters are left to sit, they may permanently damage or stain the finish.
• Use a spray degreaser to remove fingerprints and greasy spatters. Spray onto a cloth and wipe the surface. Buff dry immediately to avoid streaking. For hard water stains, use white vinegar and water.
• If in doubt about using one of your cleaners, check the label. Test a small amount of the cleaner on an inconspicuous area of your rangetop to make sure it is safe and does not damage the surface.
**Before Using for the First Time**

Clean your gas cooktop thoroughly with hot water and a mild detergent. Rinse and dry with a soft cloth. This removes any residual oil and grease left on the surface from the manufacturing process.

• Before using your gas cooktop, check that the surface burners are assembled correctly.

**Using the Gas Cooktop**

To light a burner, push and turn the corresponding control knob counterclockwise to HI. The igniter will begin to click until burner is lit. Once lit, continue to turn knob counterclockwise to desired setting.

**Cleaning the Gas Cooktop**

**Stainless Steel**

Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.

**Burner Grates**

Remove and place on a flat surface near the sink. Clean with hot water and mild detergent or paste of baking soda and water. Do not immerse in water. Towel dry.

**Surface Burners**

Allow to cool. Use mild detergent or spray degreaser to clean. Rinse with water and towel dry.

**Control Knobs**

Using a damp cloth, wipe with mild detergent or spray degreaser; rinse and dry. Do not place in dishwasher.

INDUCTION COOKTOP

BEFORE USING FOR THE FIRST TIME
- The cooktop surface must be free of foreign substances, especially those that could melt and permanently adhere to the glass-ceramic surface.
- When the cooktop is powered up for the first time, it will default to lock mode.
- To unlock the control panel, touch and hold the key symbol for five seconds.
- Use hot water and a mild detergent to clean the cooktop surface thoroughly before operating for the first time.
- You may notice a small amount of smoke and odor during the initial break-in period; this is normal.

USING THE INDUCTION COOKTOP
A cooking technology favored by many professional chefs, induction combines fine control, a wide range of power, instant response to changes in temperature setting, and energy efficiency. Your Wolf induction cooktop is engineered and tested to help you create delicious meals for decades to come.

TEMPERATURE SETTING GUIDE

<table>
<thead>
<tr>

CLEANING THE INDUCTION COOKTOP:

STAINLESS STEEL
Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.

CONTROL PANEL
Use spray degreaser to remove fingerprints and food soil. Spray on a cloth before wiping panel.
- Do not spray cleaners directly on the control panel.

GLASS-CERAMIC SURFACE
Allow to cool. Use spray degreaser to remove fingerprints and a non-abrasive Ceran® cooktop cleaner for food soil.
Do not allow any item that could melt to come in contact with the glass-ceramic surface when hot. If this occurs, use the razor blade scraper provided with the cooktop to remove.

ELECTRIC COOKTOP

BEFORE USING FOR THE FIRST TIME
- Clean the cooktop surface thoroughly with a non-abrasive cleaner and lightly dampened cloth before operating for the first time and after each use.
- The cooktop surface must be free of any foreign substances, especially those that could melt and permanently adhere to the glass-ceramic surface.
- When the cooktop is powered up for the first time it will default to lock mode. To unlock the control panel, touch and hold the key symbol for five seconds.
- You may notice a small amount of smoke and odor during the initial break-in period; this is normal.

USING THE ELECTRIC COOKTOP
Wolf brings fine control, an impressive range of power, and a sleek aesthetic to its easy-to-maintain electric cooktops.

TEMPERATURE SETTING GUIDE

<table>

</tr>
</tbody>
</table>

CLEANING THE ELECTRIC COOKTOP:
- Wait until cooktop surface is cool. It will be safe to clean when the hot-surface indicator light is not illuminated.
- Hold key button for three seconds to lock cooking surface.
- Always use a non-abrasive cleaner and damp cloth to remove residue from the surface and wipe with a dry cloth.
- For best results, wipe up spills and splatters either as they occur or as soon as surface has cooled.
- If left to cook on, high sugar content spills may permanently damage cooking surface. Use the razor blade scraper provided with your cooktop to remove heavy or burned-on spills.
- Use a spray degreaser to remove fingerprints and greasy spatters.
- To clean the stainless steel trim of framed models, use a non-abrasive stainless steel cleaner and apply with a soft, lint-free cloth. Remove any cleaning residue from the trim and wipe with a dry cloth.
BEFORE USING FOR THE FIRST TIME

Clean steamer module thoroughly with hot water and a mild detergent. Rinse and dry with a soft cloth. This removes any residual oil and grease left on the surface from the manufacturing process.

- When the steamer module is powered up for the first time, it will default to lock mode.
  
  To unlock the control panel, touch and hold the KEY symbol for three seconds.

- You may notice a small amount of smoke and odor during the initial break-in period; this is normal.
Using the Steamer

Immensely versatile, your Wolf steamer module can not only cook nutritious and delicious vegetables, grains, and proteins, but it can also quickly defrost frozen foods and can even help you prep desserts by melting chocolates with no risk of scorching.

Cleaning the Steamer:

- Make sure the steamer module is off and all surfaces are cool before cleaning any part of the unit.
- Do not use abrasive cleaners; they will permanently scratch stainless steel surfaces.
- Salt and some cooking liquids may pit and stain the surface. Remove these spills immediately.

Drain Strainer:

- A screen drain strainer is installed into the drain outlet to keep food particles from clogging the drain valve.
- Lift the drain strainer out and rinse after each use to remove food particles.

Control Panel:

- Do not spray directly on the control panel.
- Use a clean cloth or sponge and wipe the control panel with warm water and a mild detergent.

Steaming Basin:

- Empty water from the steamer basin.
- Pour approximately 4 quarts of warm water with mild detergent into the empty basin. Scrub with a nylon brush. Rinse well, drain, and dry thoroughly.
- Use a spray degreaser to remove fingerprints and greasy spatters. Spray on a cloth and wipe the surface. Do not spray directly on the control panel.
- Use a clean cloth or sponge and wipe the panel with warm water and a mild detergent. Rinse and dry immediately.

Glass Lid:

The reversible domed glass lid is dishwasher-safe. It may also be washed by hand with warm water and a mild detergent. Rinse and dry.

Defrosting Insert Pans:

The solid and perforated insert pans are dishwasher-safe. They may be washed by hand with warm water and a mild detergent. Rinse and dry.
Fryer

Before Using for the First Time:
Clean fryer module thoroughly with hot water and a mild detergent. Rinse and dry with a soft cloth.
• When the fryer module is powered up for the first time, it will default to lock mode. To unlock the control panel, touch and hold the key symbol for three seconds.
• You may notice a small amount of smoke and odor during the initial break-in period; this is normal.

Using the Fryer:
• Deep frying requires oils with a high smoke point; use only deep frying oil or fat that is devoid of water and protein.
• The best oils to use are those with a smoke point above 400°F.
• After using your fryer, allow oil or fat to cool, then replace the low-profile storage lid to prevent oil contamination.
• Remove food particles after every use of the deep fryer.
• Never fill the fryer above the high mark in the fryer basin.
• If the oil is too hot, the outside of the food will burn before the inside can cook.
• Replace the oil in your fryer after three uses; oil’s smoke point diminishes as the oil is reused.
• Deep-fry in small batches. Frying too much food at once can lower the oil temperature and result in greasy food.

Frying Oils and Smoke Points

</table>
CLEANING THE FRYER

- Make sure the fryer module is off and all surfaces are cool before cleaning any part of the unit.
- Do not use abrasive cleaners; they will permanently scratch stainless steel surfaces. Salt and some cooking liquids may pit and stain the surface. Remove these spots immediately.
- Use a spray degreaser to remove fingerprints and greasy spatters. Spray on a cloth and wipe the surface. Buff dry immediately to avoid streaking. For hard water stains, use white vinegar and water.
- For general cleaning, use a soft, non-abrasive stainless steel cleaner, like Signature Polish, and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe the surface with a water-dampened, microfiber cloth followed by a dry polishing chamois. Polish with the grain direction of the finish. You will obtain best results by keeping the cloth in continuous contact with the stainless steel.

CONTROL PANEL

- Use a spray degreaser to remove fingerprints and greasy spatters. Spray on a cloth and wipe the surface. Do not spray directly on the control panel.
- Use a clean cloth or sponge and wipe the control panel with warm water and a mild detergent. Rinse and dry immediately.

FRYER BASIN

Empty oil from the fryer basin. Pour approximately four quarts warm water with liquid detergent into the empty basin. Scrub with a nylon brush. Rinse well, drain, and dry thoroughly. If the basin is not dried thoroughly, excess water may spatter hot oil and cause burns.

FRYER BASKET AND HANGERS

Fryer baskets and hangers are dishwasher-safe. They may also be washed by hand with warm water and liquid detergent.
USING THE WARMING DRAWER

- Always preheat the warming drawer. Preheat three minutes for PROOF, four minutes for LOW, seven minutes for MEDIUM and 13 minutes for HIGH.
- Always start with hot food. The warming drawer will keep hot food at serving temperature. Do not use the warming drawer to heat cold food. Proofing yeast dough and crisping crackers, chips, or dry cereal are the exceptions.
- With large loads, it may be necessary to use a higher temperature setting and to cover some of the cooked food items.
- Food should be kept in the cooking container or transferred to a heat-safe serving dish prior to being placed into the warming drawer.
- Food in heat-safe glass or glass ceramic containers may need higher temperature settings compared to food in metal containers.
- Remove serving utensils before placing food containers in warming drawer.
- Aluminum foil may be used to cover food to increase moisture content.
- Repeated opening of the warming drawer will allow hot air to escape and the food to cool.
- Do not place plastic containers or plastic wrap in the warming drawer.

CLEANING THE WARMING DRAWER

- Use a non-abrasive stainless steel cleaner and a soft lint-free cloth.
- To clean the control panel, use a spray degreaser to remove fingerprints and greasy splatters. Spray on a cloth and wipe the surface. Be careful not to soak the control panel. Although the panel is sealed, excessive moisture may damage the controls.
- To clean the interior, use a clean cloth or sponge and wipe the surface with warm water and a mild detergent. Rinse and dry immediately.
Using the microwave:

- Arrange food carefully. Place thickest foods toward outside of dish or plate.
- Watch cooking time. Cook for the shortest amount of time indicated and add more time as needed. Severely overcooked food can smoke or ignite.
- Cover foods while cooking. Covers prevent spattering and help foods cook evenly.
  - Check recipe or cookbook for suggestions of the cover to use: paper towels, wax paper, microwave plastic wrap, lid, etc.
  - shield any thin areas of meat or poultry with small flat pieces of aluminum foil to prevent overcooking before dense, thicker areas are cooked through.
- If possible, stir foods from outside to center once or twice during cooking.
- Turn foods over once during microwave cooking to speed cooking of foods such as chicken and hamburgers. Large items such as roasts must be turned over at least once.
- When cooking a platter or dish foods, such as meatballs, that are divided into small portions, rearrange the foods halfway through cooking, both from top to bottom and from right to left.
- Check for doneness. Look for signs indicating that the desired temperatures have been reached.

Cleaning the microwave:

Interior:

- Cleaning is easy because little heat is transferred to the interior surfaces. Spill and spatters will not bake on.
- To clean the interior surfaces, including drawer sealing surfaces, wipe with a soft, damp cloth.
- For heavier spatters, use baking soda or a mild soap. Rinse thoroughly with hot water.
- Do not use abrasive or harsh cleaners or scouring pads.
- Do not use chemical oven cleaners.
- The waveguide cover, located on the inside top of the microwave interior, is made from mica and requires special care.
  - Keep the waveguide cover clean to ensure good microwave performance.
• Use a soft, damp cloth to carefully wipe any food spatters from the surface of the cover immediately after they occur.
• Built-up spatters may overheat and cause smoke and may even catch fire. Do not remove the waveguide cover.

CONVECTION MICROWAVE OVENS

USING THE CONVECTION MICROWAVE OVEN:

MICRO BAKE / MICRO ROAST

The convection microwave oven has two preset settings that make it easy to cook automatically with both convection heat and microwave. Microwave-safe or oven-safe bakeware may be used. With the exception of foods that cook best by convection cooking alone, most foods are well suited to combination cooking using either micro bake or micro roast. Refer to the chart below. The temperatures, which range from 100°F (40°C) to 450°F (230°C), can be changed; however, the power level cannot.

COMBINATION COOKING

<table>
<thead>
<tr>
<th>SETTING</th>
<th>TEMPERATURE</th>
<th>POWER</th>
</tr>
</thead>
<tbody>
<tr>
<td>MICRO BAKE</td>
<td>325°F</td>
<td>10%</td>
</tr>
<tr>
<td>MICRO ROAST</td>
<td>300°F</td>
<td>30%</td>
</tr>
</tbody>
</table>

TO SELECT COMBINATION COOKING:

1. Touch MICRO BAKE or MICRO ROAST. If a temperature other than the default preset is desired, touch MICRO BAKE or MICRO ROAST again, then use number pads to enter temperature (e.g. 6 for 350°F (175°C)).
2. Touch START/QUICK ON to begin preheat.
3. When preheat is complete, add food, enter desired cook time, then touch START/QUICK ON.

MANUAL CONVECTION

During convection cooking, hot air is circulated throughout the oven to brown and crisp foods quickly and evenly. To view set temperature during cooking, touch CONV. To select manual convection:

1. Touch CONV. If a temperature other than the default preset is desired, touch CONV again, then use number pads to enter temperature (e.g. 6 for 350°F (175°C)).
2. Touch START/QUICK ON to begin preheat.
3. When preheat is complete, add food, enter desired cook time, then touch START/QUICK ON.

AUTO DEFROST

The auto defrost feature uses preset settings to defrost selected food items. To select auto defrost:

1. Touch AUTO DEFROST, then use number pads to select desired food (e.g. 3 for Chicken Pieces).
2. Use number pads to enter weight.
3. Touch START/QUICK ON. After a period of time, the microwave oven will stop so food can be checked.
4. Open door and turn food over.
5. Repeat until defrost is complete

AUTO DEFROST GUIDE

<table>
<thead>
<tr>
<th>NUMBER</th>
<th>FOOD</th>
<th>AMOUNT</th>
<th>METHOD</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Ground Meat</td>
<td>1/2-3 LB</td>
<td>Remove any thawed pieces after each audible signal. Let stand for 5-10 minutes, covered.</td>
</tr>
<tr>
<td>2</td>
<td>Steak, Chops</td>
<td>1/2-4 LB</td>
<td>After each audible signal, rearrange. If there are warm or thawed portions, shield with small flat pieces of aluminum foil. Remove any meat that is almost defrosted. Let stand for 10-20 minutes, covered.</td>
</tr>
<tr>
<td>3</td>
<td>Chicken Pieces</td>
<td>1/2-3 LB</td>
<td>After each audible signal, rearrange pieces or remove should they become warm or thawed. Let stand for 10-20 minutes, covered.</td>
</tr>
</tbody>
</table>

GOURMET

The Gourmet feature removes the guesswork from selecting a temperature and cooking mode. Select a food from the Gourmet guide on the control panel and the microwave oven does the rest. Some foods may require additional control panel interaction to select desired doneness. Follow directions on the control panel display to select desired options.

TO SELECT GOURMET:

1. Touch GOURMET, then use number pads to select desired food and doneness.
2. Touch START/QUICK ON.

**CLEANING THE CONVECTION MICROWAVE OVEN:**

**STAINLESS STEEL**

Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamoir. Always follow the grain of stainless steel.

**DRAWER FRONT**

Spray glass cleaner on a cloth to clean.

**DRAWER GUIDES**

Remove the food crumbs from the drawer guides. Wipe with a soft dry cloth.

**CONTROL PANEL**

Use spray degreaser to remove fingerprints and food soil. Spray on a cloth before wiping panel.

Do not spray cleaners directly on the control panel.

**INTERIOR WIPe**

With a soft damp cloth. Do not use abrasive or harsh cleaners or scouring pads.

For heavier soil, use baking soda or a mild soap, rinse thoroughly with hot water. Do not use chemical oven cleaners.

**WAveGuide COVeR**

The waveguide cover is located on the inside top of the microwave interior. Carefully wipe with a soft damp cloth. Do not remove the waveguide cover.
**DRAWER MICROWAVE OVENS**

**USING THE DRAWER MICROWAVE OVEN**

**GOURMET MODE**
The Gourmet feature detects moisture and humidity from food as it heats and automatically adjusts cook time and power level. Fresh vegetables and poultry have two options. Follow directions on the control panel display to select the desired option.

**TO SELECT WOLF GOURMET:**
1. Touch WOLF GOURMET, then use number pads to select desired food (e.g. 5 for baked potatoes).
2. Touch START.

**GOURMET GUIDE**

**CLEANING THE DRAWER MICROWAVE OVEN:**

**STAINLESS STEEL**
Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.

**DRAWER FRONT**
Spray glass cleaner on a cloth to clean.

**DRAWER GUIDES**
Remove the food crumbs from the drawer guides. Wipe with a soft dry cloth.

**CONTROL PANEL**
Use spray degreaser to remove fingerprints and food soil. Spray on a cloth before wiping panel. Do not spray cleaners directly on the control panel.

**INTERIOR**
Wipe with a soft damp cloth. Do not use abrasive or harsh cleaners or scouring pads. For heavier soil, use baking soda or a mild soap; rinse thoroughly with hot water. Do not use chemical oven cleaners.

**WAVEGUIDE COVER**
The waveguide cover is located on the inside top of the microwave interior. Carefully wipe with a soft damp cloth. Do not remove the waveguide cover.

**AUTO DEFROST**
The auto defrost feature uses preset settings to defrost select food items. To select auto defrost:
1. Touch AUTO DEFROST, then use number pads to select desired food (e.g. 3 for Chicken Pieces).
2. Use number pads to enter weight.
3. Touch START/QUICK ON. After a period of time, the microwave oven will stop so food can be checked.
4. Open door and turn food over.
5. Repeat until defrost is complete.

**Using Downdraft Ventilation**

**Activation**
1. To activate the downdraft, press the UP/DOWN button on the control module.
2. Once the UP/DOWN button is pressed, the downdraft blower will turn on at the last speed used or on low for first-time use.

**Blower Speed**
1. To adjust the speed of the blower, press the HIGH, MEDIUM or LOW button.
2. The corresponding LED will illuminate to indicate the blower speed.
3. To initiate boost mode, press and hold the HIGH+ button for 5 seconds. Boost increases airflow by approximately 20 percent more than high but is limited to 10 minutes. After 10 minutes, the blower will automatically transition to high.

**Delay Feature**
The delay feature continues blower operation for approximately five minutes after use, then automatically turns the unit off. If the blower was operating on high or medium speed, the blower will transition to the next lowest setting for five minutes before turning off. The chimney will stay up until the UP/DOWN button is pressed.

CLEANING DOWNDRAFT VENTILATION

CONTROL MODULE
• Use a spray degreaser to remove fingerprints and greasy spatters. Spray cleaner on a cloth and wipe the surface. Do not spray directly on the control module.
• Use a clean cloth or sponge and wipe the surface with warm water and a mild detergent. Rinse and dry immediately.
• Be careful not to soak the control module. Although the module is sealed, excessive moisture may cause damage to the controls.

FILTER CARE
• The aluminum mesh filters should be cleaned approximately once a month or every 30 uses. The FILTER indicator on your control module will illuminate when it is time to clean the filters.
• To remove the filters, push down on the filter frame while pulling the filter out and away from the downdraft.
• The filters and filter covers are dishwasher-safe (preferably at a temperature of approximately 140°F) and are designed to fit most dishwashers. They may also be hand-washed.
• After washing, when filters are dry, reinstall using the reverse procedure.

• Do not operate the downdraft without filters. This may damage the blower or other internal components.

PRO VENTILATION

USING PRO VENTILATION
HEAT SENTRY
When the heat sentry feature detects heat, it turns the ventilation hood on and adjusts the blower speed automatically. The heat sentry feature activates when the exhaust temperature from the hood reaches 200°F and deactivates when the exhaust temperature decreases to 186°F.

LED LIGHTING
A suction-cup light bulb changer is provided with all pro ventilation hoods to help you remove and replace the halogen light bulbs.

CLEANING PRO VENTILATION
FILTERS
To remove filters, press upward then rotate bottom outward. To aid in removal, remove center filter first. Remove grease cups from bottom edge of hood (not included with pro hood liners). Gloves should be worn when handling filters. Rinse using the reverse procedure. Outer filters may need to be pushed over while the center filter is installed. Filters are dishwasher-safe and are designed to fit most dishwashers. Wipe filters and grease cups (if applicable) to remove excess grease before placing in the dishwasher.

STAINLESS STEEL
Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with a water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.

CONTROL KNOBS
Using a damp cloth, wipe with mild detergent or spray degreaser; rinse and dry.

COOKTOP VENTILATION

USING COOKTOP VENTILATION
BLOWER
• To adjust blower speed, touch HIGH+, MEDIUM or LOW. Touch again to turn the blower off.
• To initiate boost mode, touch and hold HIGH+ for 3 seconds. Boost increases airflow by approximately 20 percent more than high but is limited to 10 minutes. After 10 minutes, the blower will automatically transition to the previous selected speed.

DELAY
The delay feature automatically turns the lights and blower off after 10 minutes of operation.

CLEANING COOKTOP VENTILATION
FILTER
The grease filters should be cleaned when the filter indicator is illuminated on the control panel, or after approximately 100 hours of operation. Filters are dishwasher-safe and are designed to fit most dishwashers. Wipe filters to remove excess grease before placing in the dishwasher.

For black hoods, to access filters, release the catch and gently pull down the front edge of the bottom panel of the hood and allow it to rotate downward. For stainless and glass hoods, there is no bottom panel.

• Do not operate the ventilation hood without the grease filters.

CARE RECOMMENDATIONS

CLEANING
STAINLESS STEEL
Use a non-abrasive stainless steel cleaner and apply with a soft lint-free cloth. To bring out the natural luster, lightly wipe surface with water-dampened microfiber cloth followed by a dry polishing chamois. Always follow the grain of stainless steel.

CONTROL PANEL
Use spray degreaser to remove fingerprints and food soil. Spray on a cloth before wiping panel. Spray glass cleaner on a cloth to clean glass.

IMPORTANT NOTE: Do not spray cleaners directly on the control panel.
BEFORE USING THE OUTDOOR GRILL

- Open the grill hood completely. Do not attempt to light the grill with the hood closed.
- Open the gas supply shut-off valve.
- Push in the burner control knob and confirm that the hot surface igniter glows. The hot surface igniters are located below the burner grates inside the flash tubes. The rotisserie igniter is located on the rear panel next to the rotisserie burner. If the igniter does not glow, verify that the grill is plugged into a 120 V AC electrical outlet.
- Push in and turn the knob counterclockwise to the HI position. Hold the knob in for five seconds. A flame will be visible under the briquettes or on the rotisserie or sear burner. Once you see the flame, release the knob. If the burner doesn’t light within five seconds, turn knob to the OFF position, wait five minutes and repeat the lighting procedure. There may be a popping sound when the burners are first lit, this is normal.
- Close the hood and allow the grill to preheat until the desired temperature is displayed.

USING THE OUTDOOR GRILL

GRILLING METHODS:

Direct method: Food cooks directly over the heat source. Turn food halfway through grilling time for even cooking. The hood may be open or closed. Use for steaks, chicken pieces, chops, and vegetables.

Indirect method: Food is placed next to heated area, not on top of it. Place food in the middle of the grill with the outside burners on. Hood must be closed. Use for ribs, large roasts, whole poultry, and rotisserie grilling of large roasts or poultry. Select the grilling method best suited to the food you will be cooking: direct, indirect, or rotisserie.

TO ACCESS RECEIPIES AND “HOW TO” VIDEOS, VISIT SUBZERO-WOLF.COM. FOR CUSTOMER CARE, CALL 1-800-363-3818.
HEAT SETTINGS:

• HI AND SEAR: Use for quick searing of meats and vegetables.
• MED: Grill steaks, pork chops, and hamburgers. You may also sear meats on medium before finishing them on low.
• LO: Use for cooking dense vegetables, roasts, thick cuts of meat, poultry, and fish.

TIPS FOR SUCCESSFUL GRILLING:

• Never leave food unattended.
• Cooking with the hood closed will decrease cooking time, provide an even temperature, conserve gas, lessen flare-ups, and improve flavor.
• Do not place food on aluminum foil for cooking. Grease trapped in the foil may cause flare-ups.
• Trim excess fat from meats and slit the remaining fat at two-inch increments to avoid flare-ups and curling. Fatty meats may be cooked indirectly on lower heat settings.
• When opening the hood, wear a barbecue mitt that covers your wrist. Stand to the side of the grill and raise the hood slowly.
• Allow meat to defrost in the refrigerator overnight, rather than microwaving it, to help retain juices.
• Apply salt to meat only after cooking to prevent it from drying out.
• Baste meat with barbecue sauce or other sugar-based sauces only during the last few minutes of cooking to prevent burning.
• Turn food only once, halfway through cooking time.
• Use a spatula or tongs to turn meat, instead of piercing with a fork, to prevent juices from escaping.
• Brush vegetables, lean cuts of meat, skinless poultry, fish, and seafood with oil to prevent sticking.
• If using bamboo skewers, soak the skewers in cold water for 30 minutes before cooking.
• To burn off grease drippings after cooking, operate the grill on high for five minutes. When the grill cools down, remove and clean the drip tray.

CLEANING THE OUTDOOR GRILL

GENERAL CLEANING

CERAMIC BRIQUETTES AND BRIQUETTE TRAY

• It is not necessary to clean the ceramic briquettes after every grilling. They will burn themselves clean during the next cooking cycle. If desired, operate the grill on high for 10–12 minutes to burn the briquettes clean.
• Periodically, the briquette trays need to be cleaned. Allow briquette trays to cool.

SMOKE BOX

The smoker box and lid can easily be removed from the outdoor grill for cleaning.

Empty contents and clean with warm water and a mild detergent.

GRILL Drip TRAY

The grill drip tray collects grease and food particles. Allow the drip tray and its contents to cool before cleaning. Slide the tray out and wipe it clean. Make sure the drip tray is fully inserted back into the grill. To avoid a grease fire, the drip tray should be cleaned after every use.

MAINTENANCE

INFRARED SEAR BURNER

• The infrared sear burner has a stainless steel housing and protective screen. The screen helps reflect heat up to the cooking surface and also prevents food particles from falling onto the ceramic burner. At searing temperatures, all food particles will be burned off. The only maintenance required is to clean the protective screen and check for particles that may be trapped.
• Never allow liquids to come in contact with the infrared sear burner. This could damage the ceramic tiles.

GRILL BURNER INSPECTION

• Inspect the grill burners for spiders and insects once a year or if the grill has not been used for more than a month.
• Inspect the grill burners if the grill does not reach temperature, heats unevenly, or if flames appear yellow along with the smell of gas.
